

## Installing *Maths Investigator* on an RM CC3 Network

1. Install **Maths Investigator > Network > Server** on the server machine by following the user instructions on the installation wizard.
2. Manually share the folder with full access permissions to the **PMI\_userData** folder in the location where you have installed *Maths Investigator*.
3. Open the package builder on a clean machine, click on **Build Package** and create the first screen shot.
4. When asked for the location of the exe to launch, navigate to the *Maths Investigator* CD and select **MathsInvestigator\_5.msi**.
5. Install **Maths Investigator > Network > Client** by following the user instructions on the installation wizard. Ensure you have the correct IP address of the server computer from step 1. To find the system IP, open a Dos prompt, click **Run**, type **CMD**, and then type **IPCONFIG**.
6. Take the final snapshot and finish the package-building process.
7. Allocate the package to workstations as normal, ensuring that you put the shortcut on machines manually.
